Elementary

WORK EXPERIENCE

SaVests
Software Developer Intern
(September 2020 - Present)

I wrote clean code to develop functional web and mobile applications. I also helped to troubleshoot and debug applications, as well as wrote tests to optimize performance. I also collaborated with frontend developers to integrate user-facing elements with server side logic. I provided training and support to non-technical teams and also built reusable code and libraries to ease subsequent development processes.

GitIT Technologies Limited
Software Developer Intern
(February 2019 - August 2020)

I wrote Python scripts to automate already existing manual processes. Refactored Python scripts and converted them to their Java alternatives to better fit the stack. I also developed and implemented a skin color transfer program as well as setup and maintained the Linux servers on which our programs ran.

National Identity Management Commission
Software Developer Intern
(December 2018 - July 2019)

I designed and developed optimized apis for capturing identity records on other platforms. I also worked in collaboration with other developers in debugging already existing applications as well as implemented new features and troubleshot database related issues.

National Gas Company
Industrial Trainee
(May 2017 - August 2017)

I installed and managed their servers, as well as training and providing support to other non-tech members to properly use company required software.

EDUCATION

Covenant University
Bachelor's Degree Computer Science
(August 2016 - January 2021)

PROJECTS

Fifton Academy
https://www.fiftonacademy.com
November 2019

Designed and developed both the frontend and backend using Django and HTML/CSS with JavaScript

Skin Color Transfer
https://github.com/f-gozie/skin-color-transfer
June 2020

Designed and developed using Python and OpenCV

Computer Vision
https://github.com/f-gozie/computer-vision
February 2019

Designed and developed using Python and OpenCV
